CASING ROTATORS | for Foundation Drills

The Pengo Casing Rotator is used to position casings into a hole that is being drilled in soils that may cave in.

The four adjustable arms are used to stabilize the soil in such conditions.

The casing rotator is available in three sizes; small, medium and large with a standard hub options. We offer special arm lengths upon request.

DIA	130MM	150MM	177MM	200MM
24"-42"	1000480	1000481	1000482	1000483
36"-60"	1000484	1000485	1000486	1000487
60"-100"	1000488	1000489	1000490	1000491

CASING ROTATORS | for Foundation Drills

You have challenges, we have solutions! The Pengo Pan Auger is a shallow auger that was designed to be used in retrieving large rocks and boulders out of a hole. A 4" hard-faced flight guard protects the rocks from falling off the edge. A pilot bit and/or special tooth options may be added for a combination of drilling and retrieving.

REAMER ARMS | for Foundation Augers

There comes a time when you need to extend the cut diameter of your auger. The Pengo rock or dirt reamer arm kits give you the option of increasing the diameter from 3" to 12".
